Updated UI

Raise Question

A new feature update or an evolved version of Raise Hand which provides a space to the participants to post their questions (online or offline) which can be answered by any other participant (online and offline).

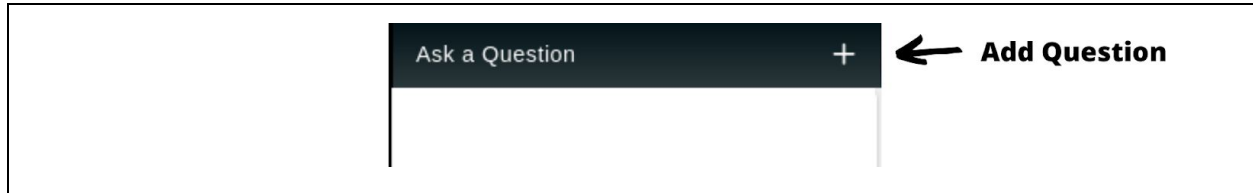

Functionalities

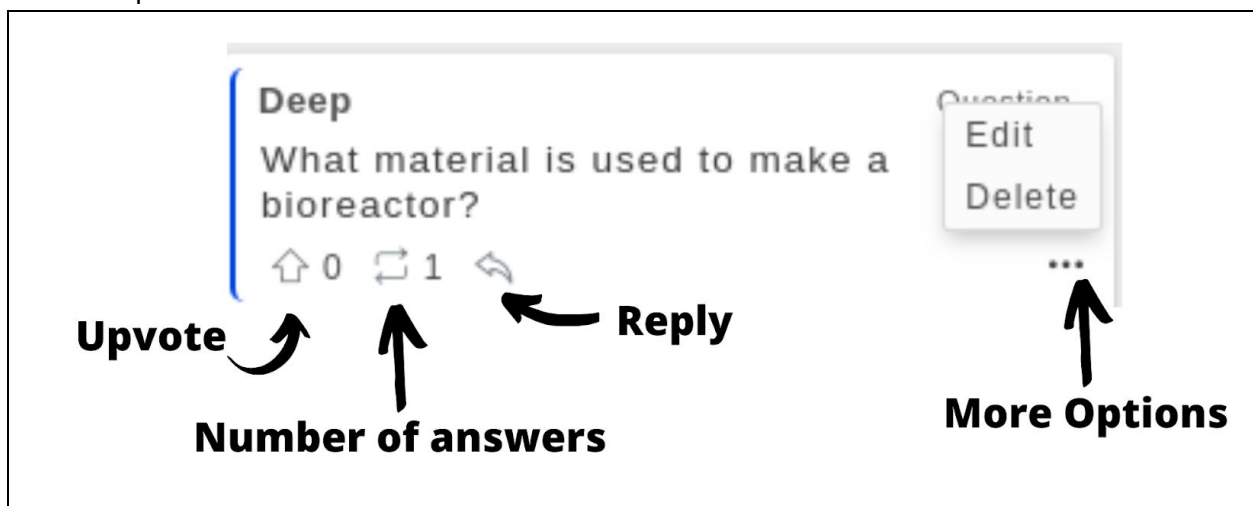

- Context linking - The question posted will be mapped with the ongoing context of the classroom. For instance, all the questions asked during page 1 of the whiteboard will be mapped with it and will be visible whenever the context shows up, during the session or while viewing the recording.
- Upvote - To promote collaboration participants will get the functionality to upvote someone's question as well as the answer.
- Comment - To encourage discussion participants can comment on the answers posted by others.
- Mark as answer - Teacher will get the functionality to mark any given answer as final which will in turn close that particular question i.e., no further answers can be posted on that question. However, participants can still post comments on the answers of that question. By default the answers posted by the teacher will be marked as final answers.
- View all questions - While viewing the recording the viewer can use this functionality to view all the questions in one go without mapping the context.
- Coloured seekbar - To enable easy navigation, the seekbar of recording will be highlighted with colours.
 - Black lines - will be used to denote changing context
 - Red portion - will denote that the questions have been added onto that particular context

Recording seekbar

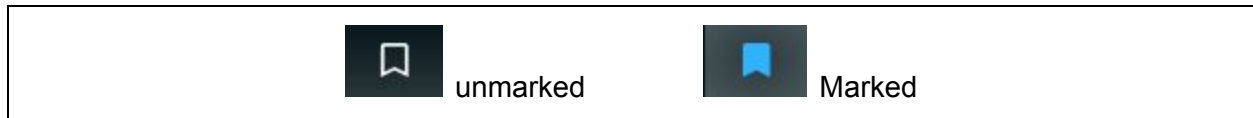

Viewing all questions in the recording

Bookmark

Designed to enable the participants to pin any ongoing context of the session both during the live session and while viewing recording for their later reference.

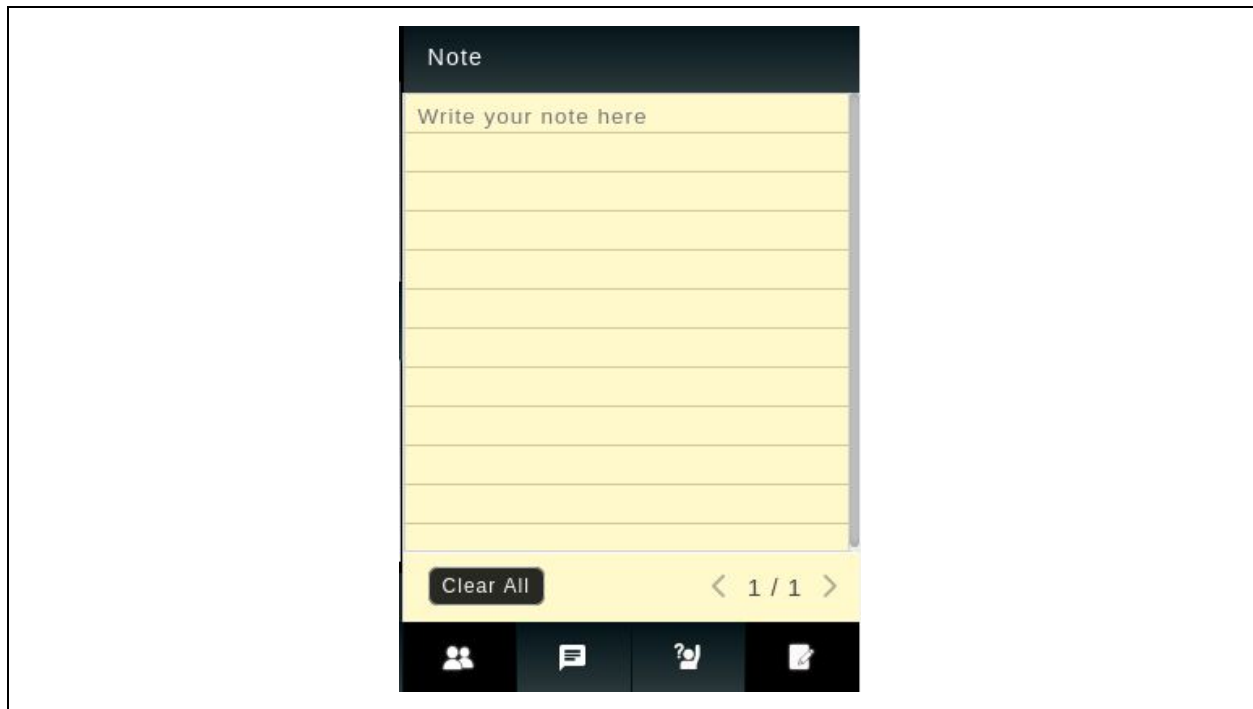

Functionalities

- Anyone in the live session/recording can click this button present in the bottom panel to create a bookmark of a particular context for their later (in recording) reference
- Bookmark icon will change the colour once clicked
- Reclicking the same would allow them to unmark the bookmarked context
- All the bookmarks will appear as yellow highlights (just next to the highlight of context) in the seekbar of recording

Notes

This feature provides the participants with a dedicated space to add their personal notes which gets linked with the ongoing context of the classroom. These notes can be added and viewed anytime during and after the session (recording).

Functionalities

- All the users will get a separate writing space in the right side panel once they click the notes icon
- This will allow them to add notes to a particular context
- For every context different notes can be generated and same will be reflected using the pagination, the total count of which will reflect the total number of notes being added
- User can easily navigate between the added notes in the live session as well
- Once a particular note has been cleared using the clear all button the total number of notes will also get reduced by 1
- All the added notes will be shown as bookmark highlights in the seekbar of recording

Access to functionalities

Functionality	Student		Presenter of session		Teacher of course	
	Live	Recording	Live	Recording	Live (can login as student)	Recording
